JAVA SNACKS - DONTPERISH
(Monday, July 20, 2026)

Instructions:

1. Avoid using Artificial Intelligence(AI) tools.

2. Submission must be done before Wednesday.

3. Each question is to be in a different file.

4. All files must be pushed to a git repository.

1. (Cubing a Number) Write a method that takes an integer and returns its cube. For example, given 3, the method should return 27. Incorporate the method into an application that reads a value from the user and displays the result.

2. (Adding Ten) Write a method that takes an integer and returns the result of adding 10 to it. Incorporate the method into an application that reads a value from the user and displays the result.

3. (Halving a Number) Write a method that takes an integer and returns half of it as a decimal value. For example, given 5, the method should return 2.5. Incorporate the method into an application that reads a value from the user and displays the result.

4. (Absolute Value) Write a method that takes an integer and returns its absolute value, without using Math.abs. Incorporate the method into an application that reads a value from the user and displays the result.

5. (Divisibility by Three) Write a method that takes an integer and returns true if it is evenly divisible by 3, false otherwise. Incorporate the method into an application that reads a value from the user and displays the result.

6. (Celsius to Fahrenheit) Write a method that takes a temperature in Celsius and returns the equivalent in Fahrenheit. Incorporate the method into an application that reads a value from the user and displays the result.

7. (Palindrome Check) Write a method that takes a String and returns true if it reads the same forwards and backwards. Incorporate the method into an application that reads a value from the user and displays the result.

8. (Printing Stars) Write a method that takes an integer and prints that many asterisks on a single line. For example, given 4, the method should print **. Incorporate the method into an application that reads a value from the user and displays the result.**

semicolon

9. (Sum of Two Numbers) Write a method that takes two integers and returns their sum. Incorporate the method into an application that reads two values from the user and displays the result.

10. (Difference of Two Numbers) Write a method that takes two integers and returns the result of subtracting the second from the first. Incorporate the method into an application that reads two values from the user and displays the result.

11. (Decimal Division) Write a method that takes two integers and returns the result of dividing the first by the second as a decimal value. Incorporate the method into an application that reads two values from the user and displays the result.

12. (Remainder) Write a method that takes two integers and returns the remainder when the first is divided by the second. Incorporate the method into an application that reads two values from the user and displays the result.

13. (Larger of Two Numbers) Write a method that takes two integers and returns the larger one. Incorporate the method into an application that reads two values from the user and displays the result.

14. (Smaller of Two Numbers) Write a method that takes two integers and returns the smaller one. Incorporate the method into an application that reads two values from the user and displays the result.

15. (Equality Check) Write a method that takes two integers and returns true if they are equal. Incorporate the method into an application that reads two values from the user and displays the result.

Have fun guys!
