

WEEKEND CUPCAKES

Instructions: All tasks should be submitted on or before 12am on Monday 29th June 2026. No cramming of code.

HELP ME STUDY THE FOLLOWING:

Increment and Decrement Operator (a++, a--, ++a, --a). Relational Operator (&&, ||)

Type casting

Random

WRITE THE FOLLOWING PROGRAMS:

1. A program that ask the user for their age and print how old they'll be next year.
2. A program that ask for three integer scores and print the total and average.
3. A program that ask for temperature in Kelvin (double). Convert to Celsius ($K - 273.15$) and Fahrenheit ($(K - 273.15) \times 9/5 + 32$). Print all three on separate lines (Value in Kelvin, Celsius and Fahrenheit).
4. Declare variables for time: hours, minutes, seconds (all int). Print using print format "Time: 14:30:45"
5. A program that ask for the length and width of a rectangle, then print its area.
6. A program that ask for principalAmount (double), rate (double), and time in years (int). Calculate simple interest: $(\text{principal} \times \text{rate} \times \text{time}) / 100$. Print the interest.
7. Declare three variables: firstName (String), lastName (String), and studentId (int). Assign values and print them on separate lines. (I expect a declaration, an assignment and a printing)
8. A program that asks the user for a number and prints whether it is even or odd.
9. A program that asks for a user's first name and last name, then prints a greeting like: "Hello, Victor Perez".
10. A program that asks for a number and prints its square and cube.
